

Product Information

Trombetta Push/Pull Solenoids

P500/Q500 Family

This robust family of industrial work solenoids offers heavy work capability, high force, and stroke. The P500 are pull type solenoids and the Q500 Family are push type solenoids.

Strokes: 25mm-75mm
Forces: 265-1245 Newton

12V
24V

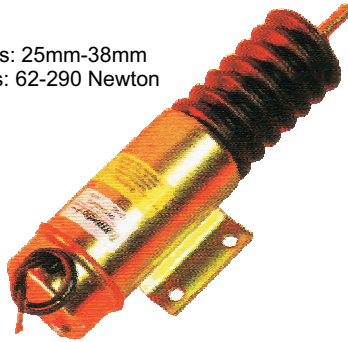

D500/D600 Family

This heavy-duty family utilizes an integral cut-out switch for dual winding coils providing the benefit of high energy pulling performance combined with low, cool, continuous holding operation without any accessories required.

Strokes: 25mm-38mm
Forces: 62-290 Newton

12V
24V
36V

P600/Q600 Family

P600 (pull type) and Q600 (push type) are built to withstand high temperature and high vibration environments. The coils found on this product grouping are fully encapsulated resulting in tough industrial work solenoids able to withstand a variety of environments.

Strokes: 19mm-38mm
Forces: 35-190 Newton

12V
24V

ISE 610 Family

Performance: An intelligent built in microprocessor control of the ISE provides intermittent duty high current punch for strong pull-in ability. The ISE increases power to maintain high pull in forces when voltages are low and/or the solenoid is hot. Conventional solenoids often fall below their specifications under those conditions.

Convenience: The solenoid can be controlled from great distances with a single wire.

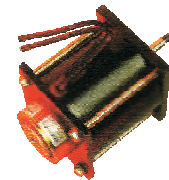

12V
25mm
55-110 Newton

Further Models

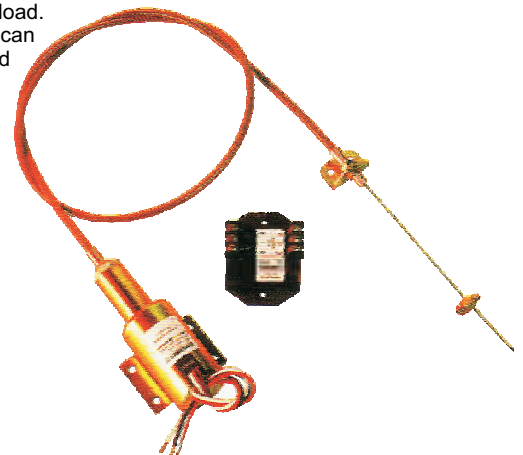

RD2 Dual Action 25-64mm Stroke
265-1110 Newton

HF Heavy Duty 25-152mm Stroke
2230-5350 Newton

Cable Kit Family

This family offers ultimate flexibility since the work solenoid can be mounted in a convenient location. Simply attach the cable to the load. Adjustments for stroke can be made at the solenoid to meet your application needs.
